STATUS: stable

CONTENT:

Purpose

This policy explains employee responsibilities for company-owned laptops, monitors, mobile devices, software, and other IT assets.

Company Ownership

Laptops, monitors, mobile devices, and other IT equipment issued to employees remain company property.

Software

Employees should install only approved software on company devices. Unauthorized software may introduce security or licensing risks.

Care of Assets

Employees are responsible for taking reasonable care of assigned equipment and should avoid leaving company devices unattended in unsafe locations.

Passwords and Access

Employees must protect device passwords and should not allow another person to use their company account.

Damage or Loss

Lost, stolen, or damaged equipment should be reported to the IT support team as soon as possible.

Repairs

Employees should not attempt unauthorized hardware repairs. Equipment problems should be reported through the approved IT support process.

Return

Company IT assets must be returned when an employee leaves the company, changes role when required, or when IT requests the equipment.

Data Removal

Employees should not independently delete or transfer company data before returning an IT asset. IT will follow the applicable asset-return process.
