

Remote Work Security Policy

TYPE: Policy

TITLE: Remote Work Security Policy

DEPARTMENT: Information Security

VERSION: 1.2

TAGS: remote work, security, VPN, laptop, data, password

STATUS: stable

CONTENT:

Purpose

This policy defines basic security requirements for employees who access company systems or information outside approved office locations.

Company Device

Employees working remotely should use company-approved devices for company work. Personal devices should not be used for restricted company information unless explicitly authorized.

Network Security

Employees should use the approved secure network or VPN when accessing internal company systems remotely.

Passwords

Employees must protect passwords and authentication credentials and should never share them with another person.

Data Protection

Company and customer data must not be stored on personal devices or shared through unauthorized cloud services or messaging applications.

Screen Security

Employees should lock their screen when leaving the device unattended and should take reasonable steps to prevent unauthorized people from viewing confidential information.

Public Locations

Employees should avoid discussing confidential information or displaying sensitive documents in public locations where other people can observe them.

Security Incidents

Lost devices, suspected data exposure, phishing attempts, or other security incidents should be reported to the security team immediately.

Software Updates

Company devices should receive required security updates and approved endpoint protection should remain enabled.
